Cover Letter – Front End Developer

To whom it may concern,

My name is Christian López and I am a web developer with more than seven years of professional experience, primarily focused on **Front End development**, working on the creation, maintenance, and evolution of web applications within collaborative environments and under agile methodologies such as SCRUM.

Throughout my career, I have been involved in the development of user interfaces and web modules using JavaScript and modern frameworks such as React, working closely with cross-functional technical teams to deliver solutions that are functional, maintainable, and aligned with business goals. I am currently part of the Roomleader team (Hotusa Group), where I work as a Front End Developer and actively contribute to the continuous improvement of the product.

In addition to my development responsibilities, I am responsible for **coordinating production deployments using Jenkins**, ensuring controlled and reliable release processes. I also provide **technical support and training to other developers** within the team, contributing to knowledge sharing, best practices adoption, and overall team efficiency.

While my specialization is Front End development, I also have **basic knowledge of vanilla PHP**, which allows me to understand the full application flow and communicate effectively with Back End profiles.

I consider myself an analytical, committed, and proactive professional with a strong problem-solving mindset, solid teamwork skills, and a continuous learning attitude. I am looking to further develop my career in technically challenging environments where I can add value through Front End development, technical collaboration, and software quality.

Kind regards,
Christian López
